

BE-SB-SG Master Stained Glass Sample Set

The complete reference to Bullseye for the stained glass designer. Over 270 separate samples including opalescents, cathedrals, iridescents, and collage glasses in 2 1/2" x 3" (64 x 76mm) samples. The larger 3" x 5" (76 x 127mm) samples of streakies and ripples assure a generous view of our most exotic offerings.

SAMPLES

textures. With approximately 700 separate samples there is not another set on the market that gives you this kind of range for your kilnwork!

BE-SB-KF Master Kilnforming Sample Set

Includes every standard color and shape that Bullseye makes for kilnwork and a few nonstandard, too. Set of 6 volumes in sturdy, shelf cases includes: thins and double-rolled sheet glass, frits, stringers, confetti, rod, iridescents and

8357 Painting with Light Pack

Nine 1-lb jars of colored powders, three jars of clear frits in fine, medium and coarse grains and an assortment of colored stringers make up the basics of this "Painting with Light" palette. Add four stencils, three sifters, graining comb, GlasTac and illustrated set of instructions on "Designing Your Own Art Glass" and you're on your way to kilnforming with a fresh and flexible touch. (Order sheet glass blanks separately)

ASSORTMENTS

8315 Studio Fuser Pack

A sampler of time-tested favorites: approximately 20 colors of 3mm and 2mm fusible sheet glass (9 sq. ft./0.84 m²), 10 tubes of colorful frits, 5 bags of confetti and 4 tubes of assorted colored stringers. Ideal for beginners, experimentation, or jewelry projects.

Shipping dimensions: 16" x 8" x 11" (406 x 203 x 279mm)

GLASS PACKS
VARIETY, CONVENIENCE, QUALITY

Whether you are outfitting a class or expanding your own palette, these cut-piece assortments give you maximum variety at minimal expense.

The Class, Lamp, Panel and Mosaic Packs each contain about 45 lbs (30 sq ft) of Bullseye glass. Some packs hold 10" x 10" pieces only and others hold 10" x 10" plus 5" x 10" pieces. All pieces are individually marked for easy reference in the enclosed mini-catalog.

Shipping Dimensions: 13" x 14" x 14" (330 x 356 x 356mm) Shipping Weight: about 50 lbs. (22.7 kg)

Tekta Pack

Clear 10" x 10" glass in a thickness for every need: 30 pieces 3mm, 8 pieces 4mm, and 4 pieces 6mm. Trimmed on four sides, uniform, clean, affordable and Bullseye Compatible.

Class Pack

This Bullseye Compatible collection is a colorful assortment of fusible transparents, opals, irids and clear glasses. May include all 10" x 10" (254 x 254mm) pieces.

Lamp Pack

A treasure chest of art glasses for lampmakers and teachers of stained glass: solid opalescents and streakies, iridescents and fracture streamers. May include all 10" x 10" (254 x 254mm) pieces.

Panel Pack

A quality assortment of catspaw opals, shimmering iridescents, jewel-tone cathedrals, daring collage glasses and subtle hand-cast textures for that special quality touch in your stained glass project. May include all 10" x 10" (254 x 254mm) pieces.

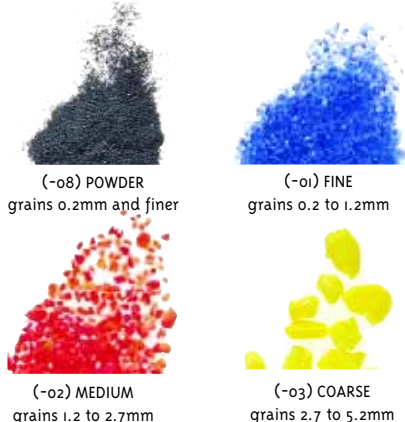

Mosaic Pack

Emphasizing bright opals and nature-inspired colors. Streakies, and irids may be included for added variety. May include all 10" x 10" (254 x 254mm) pieces.

RODS See page B14.

FRIT Bullseye frits are made from crushed, screened and magnetically cleaned Bullseye Compatible sheet glass. They are available in 3 grain sizes and powder. (See sheet glass pages for all your color choices). Frits and powders are always sold as compatible (F) and are packaged in wide-mouth 1-lb jars. 5-lb jars are available special order only.

Frits may be used in light painting, in pâte de verre and in kiln-casting, to name only a few of the many techniques made possible by these versatile little grains.

CONFETTI

Use these paper-thin shards of glass as random forms or fuse them over other glasses for shading, hazing or other types of color blending. Confetti are not tested for compatibility in the same manner as Bullseye sheet or frit. Designed to be used in very thin sections; be cautious — and test — if heavily layering confetti in fusing. Available in 4-oz jars. (1-lb jars can be special ordered.) Mini Mix comes in 8 oz. jars.

OPAL CONFETTI

TRANSPARENT CONFETTI

STRINGER

Threads of glass pulled from remelted compatible Bullseye sheet, stringers provide linework in 2- and 3-dimensional fused or torchworked projects. Bend them with a candle or use them straight from the tube.

Available in both the original 1mm (-07) & 2mm (-72) thickness. Stringers are approximately 17 1/2" long.

Both sizes of stringers are packaged in 18" long, 3/4" diameter clear plastic tubes. The contents of a tube of 1mm stringer covers at least 1 sq ft. A tube of 2mm stringer will cover over 1/2 sq ft. Tubes are packaged by volume. To equalize pricing, the contents of Cranberry Pink 1311 tubes will contain fewer stringers than tubes of other styles.

Bullseye Accessory Glass

CODING SYSTEM

Each Bullseye glass product bears a 6-digit base code, a 2-digit suffix and a final letter code.
For example: 000100-51F (Black w/rainbow Irid)

We prefer to use the old 4-digit base code and not honor the "00" portion.
Example: Bullseye Code: 000100-51F / Our Code: 0100-51F

0xxx	Solid color opal	3xxx	3-Color streaky
1xxx	Solid color transparent	4xxx	Collage glass
2xxx	2-Color streaky		

THE LETTER CODE

F: often called "Fusible," a glass that has passed factory testing for compatibility in kiln work. Also called "Tested Compatible" or "Bullseye Compatible"

THE 2-DIGIT SUFFIX in SHEET GLASS indicates surface treatment, texture, length, and/or thickness. Numbers listed on the following pages without a two-digit suffix imply -00 (single-rolled).

PRICE CODE ADD-ONS

-89	Tekta Clear Sheet, 6mm	

COLOR VARIATIONS

While Bullseye strives for consistent colors, their glass is a handmade product. Colors may vary slightly from images in this catalog, and color may vary slightly between production runs.

STRIKING COLORS

To provide the largest and most interesting palette of colors to the kilnworker and the torchworker, Bullseye produces some glasses that appear pale or colorless and "strike" (i.e. change) to the target color only after reheating. Whenever practical, catalog illustrations will indicate which styles have a different color in the cold form, compared to the "struck" color. Keep in mind that the resulting color may vary depending on variations in the temperature, atmosphere or amount of heatwork. For projects that are especially color-sensitive, we recommend fusing or torchworking a small sample of your glass before use, to best understand the final color result.

SHEET GLASS SPECIFICATIONS

	THICKNESS	MAXIMUM DIMENSIONS	AVERAGE WEIGHT
THIN	3/32"	20" x 17"	2.4 lbs
	2 mm	51 cm x 43 cm	1 kg
STANDARD	1/8"	20" x 35"	8 lbs
	3 mm	51 cm x 89 cm	3.6 kg
THICK	1/4"	20" x 35"	15.6 lbs
	6 mm	51 cm x 89 cm	7 kg
TEKTA	3 mm	24" x 48"	8 sq. ft.
	4 mm	24" x 48"	8 sq. ft.
	6 mm	24" x 48"	8 sq. ft.

CLEAR SHEET

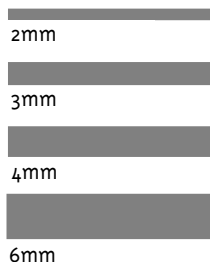

SINGLE-ROLLED
1101-F

DOUBLE-ROLLED
1101-30F

NON-LEAD CRYSTAL
1401-30F

TEKTA
1100-83F

THICKNESS

- For traditional or contemporary leaded glass, a single-rolled (-00) sheet with the slightly obscure softly wavy surface is recommended.
- For high-quality kiln work, select the double-rolled (-30 or -83) to minimize bubble entrapment.
- For delicate kiln work or precise additions to layered works, choose Bullseye's Thin (-50) sheets.
- For crystal clarity, especially in thicker kiln work, #1401 is unrivaled for brightness and purity.

TEKTA PACK
See page K86.

ORIGINAL HANDCAST CLEAR				
STYLE CODE	DESCRIPTION	THICK	W x L (MAX)	SHEET WT. (SIZE)

CONSISTENTLY ONE-OF-A-KIND

Bullseye's hand-rolled streakies are controlled for mix consistency while retaining the unique patterning of a true art glass. Color proportions in color mixes are reflected in the sequence of the description, ranging from greatest proportion to least. Opalescent glasses within the mix are designated "opal"; other colors are transparent.

MARDI GRAS

Bullseye's casting team makes collage glasses by arranging pre-formed glass elements — frits, stringers or confetti — onto the metal rolling table. They then ladle clear or other colored glass over these elements and roll them into a one-of-a-kind sheet of art glass.

Mardi Gras sheets combine a colorful sprinkling of frits with glass threads (called stringers) that fuse, twist and curve under the force of the molten glass into a lively cascade reminiscent of Carnival or ticker tape parades.

Bullseye Collage Glass

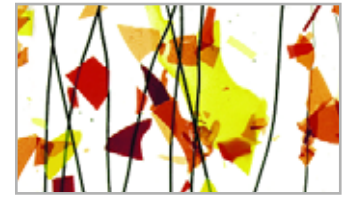

Like other collage glasses, Fracture-Streamers begin with a composition of glass elements arrayed on the rolling table: glass threads or "stringers" and chips of paper-thin blown glass called "fractures" or "confetti." A member of the casting team then delicately hand ladles molten clear or white glass over the elements. Finally another caster rolls the glass out into the dramatic collage of sensuous lines and translucent shapes that is a sheet of Bullseye "Fracture-Streamer".

Kilnformers often use sheets of Fracture-Streamer in their fused and slumped projects. Fracture-Streamer sheets are now available tested compatible denoted "-F".

IRIDESCENT

Bullseye's unique matte iridescent surface is the first choice of kiln-glass designers and artisans. Permanent at full fusing temperatures (approximately 1500° F), it is also food safe for functional tableware. All four irid textures shown are regularly available on Black (0100) and Clear (1101) in Rainbow irid.
