

Incorporated in 1888, the Kokomo Opalescent Glass Co. has been making one-of-a-kind sheets of Art Glass throughout its entire history.

**Explanation of Density Codes and Full Batch**

The term "density" refers to the amount of light that any given sheet of glass will transmit. The codes listed below may be combined with most opalescent color numbers as shown in the following example:

- 11D** Very dense—Diffuses light.
- 11MD** Medium dense—Limited light transmission.
- 11** Medium—Common density.  
(No density code following color number.)
- 11ML** Medium light—Considerable light transmission.
- 11L** Light—Wispy, translucent opal.
- 11LL** Streaky—A combination of two or more cathedral colors with no opal content.

**Full Batch** means specially formulated sheets for slumping, firing, or other "warm" applications, using 100% raw materials (no recycled cullet). It is recommended that each sheet be tested to determine shifts in density and/or color after firing.

Most colors and textures can be special ordered from the factory. We will promptly quote availability and cost per your request.

**Note Regarding Color Accuracy on Following Pages:**

While every effort has been made to present these color images as accurately as possible, there is no substitute for a sample of the actual product. These images are provided as an additional reference and are not intended to replace samples.

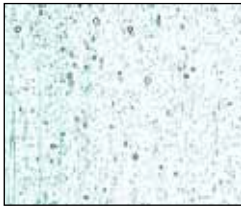

Sheet glass color MAY vary per shipment.

\*Indicates color WILL vary per shipment.

**Kokomo Rondels:** See page K154-K155.
