

DICHOIC BY SAVOY STUDIOS

Dichroic is a high-tech optical coating that selectively reflects certain wavelengths (colors) of light and allows the remaining wavelengths to transmit. This same effect is seen in nature in peacock feathers and opals. The word "dichroic" means two colors, which refers to transmitted color and reflected color. The coating process is done in a high vacuum chamber that has several pieces of specialized equipment to control and monitor the coating process.

ALL PATTERNS ARE AVAILABLE IN EITHER 90 OR 96 C.O.E. WITH RAINBOW COATING ONLY.
